DairyTrace updates for all things traceability

Welcome to DairyTrace TagTips - quick tips, helpful hints and FAQs to help you understand the most efficient ways to use your traceability tools.

DairyTrace plays a critical role in disease management

Canada's dairy industry traceability solution, DairyTrace, gets top marks from the Canadian Food Inspection Agency (CFIA) following its investigation of the bovine tuberculosis (bTB) case last year.

When bTB was confirmed in a cow on a Manitoba dairy farm last year, industry partners worked together to quickly identify other animals and farms connected to the identified herd.

The move-out and move-in data reported by dairy farmers to DairyTrace was used for tracing dairy animal movements so the disease could be rapidly contained without further spread.

The Canadian Food Inspection Agency reported that DairyTrace performed exceptionally well and was able to provide movement details in a matter of hours during the investigation.

Keeping herd inventories up to date by ensuring all animals on your farm are in DairyTrace and regularly reporting when animals enter and leave the farm, means that the traceback system can be used effectively. As proven by this disease case, your efforts are critical for managing and reducing the impacts of potential animal health issues.

Thanks to the day-to-day work of dairy farmers submitting events to DairyTrace, we have a strong traceability system that is functional and effective when needed.

DairyTrace has a new Universal Tagger

- 🐄 The green and silver pins are interchangeable and can be used with either the new tagger or the Red Total Tagger.
- 🐄 Purchase of the new tagger includes two silver pins.
